

## A11 – Satisfaction levels with higher education courses

**Baseline and Trends:** Baseline year – 2005. Figures from 2005 show that there are minimal differences in satisfaction levels with higher education courses between non disabled people (3.97), those with dyslexia (3.87) and those affected by other disabilities (3.94). These figures have not significantly changed since the baseline.

### Satisfaction levels with higher education courses

**Definition:** Disability is self reported. Data covers England, Wales, Northern Ireland and some higher education institutions in Scotland. Respondents were asked to choose an answer ranging from “Definitely agree” (5) to “Definitely disagree” (1). The scale mean presented here is obtained by adding together the students’ responses to the items under each heading, and dividing by the number of items in the scale in order to get a measure which ranges from 1 to 5 in line with the original measurement scale. Thus, a score of 1 on a scale would represent a response of definitely disagree to all constituent items; while a score of 5 would represent a response of definitely agree to all the items on the scale.

**Data Source:** National Student Survey
